

DARK GREEN CADDIS LARVA NYMPH

Recipe

Hook.....Scud or Nymph, size 10 – 14
Thread.....Olive 6/0 or 8/0
Weight.....Lead wire .015 (Optional)
Abdomen...Bright Green Antron Dubbing
Thorax.....Peacock Herl
Collar.....Brown or Black Hen Saddle
Dubbing..... Any Coarse Brown Dubbing
Head.....Thread

1. Debarb the hook and place it in your vise.
2. Tie-in the thread at the mid-point of the shank and wrap it half way down the hook bend. **(Wrap only to the beginning of the hook bend if using a nymph hook.)**
3. Pinch dub the thread with the bright green dubbing and wrap the dubbed thread 2/3's of the way up the hook shank forming a tapered body that is fatter toward the hook eye. Remove any excess dubbing and let the thread hang.
4. Select 2-3 peacock herls, trim off the butt ends, and tie them in tight against the end of the dubbed body. Move the thread forward to within 2-3 hook eye widths of the hook eye and let it hang. Now take the peacock herls and wrap a peacock thorax up to where you left the thread. Tie off and remove the excess herl. Move the thread to just behind the hook eye.
5. Select and prepare a hen saddle hackle, tie it in by its tip, and wrap it soft hackle style for 2-3 turns. Tie it off and remove the excess hackle.
6. Dub the thread with brown dubbing and make 2 turns tight in front of and against the hackle, then remove any excess dubbing and form a thread head, whip finish, and cut the thread.
7. Apply head cement, if desired.
